

## 'Virtual' becomes 'reality'

| [Next](#)  
&nbsp;

Do you want a fully immersive 'virtual' experience? US inventor, Ray Kurzweil says that it will be a reality by 2033.

Computers the size of blood cells will make this a reality. At a Game Developers Conference in San Francisco, he said that, "Virtual will compete with reality".

Incredibly, Kurzweil says that computer capability will increase a billion-fold and the physical size would shrink by 100,000 times. The chips could then be inserted into our bodies and we would be able to enjoy virtual reality from within our nervous systems...
