&nbsp;

Â

**Rick Warren's daughter-in-law has been diagnosed with a brain tumour.** Jamie Warren, 25, was found to have a serious and complex tumour at the base of her brain after a scan followed spells of dizziness, headaches and blurred vision. She has since undergone two operations and her condition is said to be improving.

This is the second health crisis that Jamie has had to endure this year. Two months ago, she underwent a Caesarean Section to give birth to baby Cole.

Rick Warren, author of *Purpose Driven Church*, has been keeping his Saddleback Community Church up-to-date with developments via e-mail. He is taking time out at the present time to be with his family.
